

[Module - PPCmod I EN]

Presentation :

This module allows you to display recommended price.

Compatibility :

PPCMOD is functional for 1.6.0.5 versions and + of Prestashop.

Installation :

- In the prestashop backoffice click on the Modules> Modules> Add Module menu.
 - Follow the installation steps
-

Configuration :

By default, the module is hooked below the "Add to Cart"

If you want display PPC on other place, place this Hook :
{hook h='displayPpcPriceOther' id_product=\$product->id}

You must change "id_product" value according to the file where you are.

Examples :

In product.tpl of your theme :
{hook h='displayPpcPriceOther' id_product=\$product->id}

or for accessories part
{hook h='displayPpcPriceOther' id_product=\$accessory.id_product}

In modules/productscategory/views/templates/hook/productscategory.tpl :
{hook h='displayPpcPriceOther' id_product=\$categoryProduct.id_product}

Add PPC price :

In the administration of your shop, go in the product sheet of an article then in the tab "PPC".
The "Principal average price" is the recommended selling price for single products or the recommended selling price by default for products with déclinaisons.
If your product has déclinaisons and these déclinaisons have an impact on the price, then you will see the "Average price of déclinaisons" appear in the tab PPC.

On the customer side, the display of the PPC and the saving will be dynamic according to the declination chosen.

For Creativeelements users :

In creativeelements/modules/catalog/widgets/product-price.php line 457, add :

```
<div>
  <p style="padding-top: 10px !important;">
    <?= \Hook::exec('displayPpcPrice2', ['product' => $product]) ?>
  </p>
</div>
```
